

Next-generation storage for Grass Valley users

High performance storage & lifecycle management for STRATUS™ and other Grass Valley solutions

Masstech's FlashNet provides powerful, flexible and highly integrated archive and storage management to users of all Grass Valley systems.

STRATUS displays real-time online and archived asset status

Together they offer a complete toolset to efficiently control the archiving, restore and lifecycle management of content, providing a seamless connection between GV systems and next-generation cloud and hybrid cloud storage.

Integration with stored content at an interface level provides users with archive, restore, Partial File Restore and other broadcast standard functions from directly within the Grass Valley applications. It's quick and easy, and there's no requirement for operator training.

Why FlashNet?

Seamless Integration

User-level integrations with Stratus, Aurora and ITX

Multiple K2 Sources

GXF and MXF files can be archived from K2 Production, K2 Summit and K2 Solo

Keep your K2s clear

Quickly and easily move finished content into near or deep storage, and free-up space on your K2 servers and systems

Class-Leading Scalability

Easily add more storage as your archive grows - without performance degradation

Instant access to your assets

Archive, find and retrieve assets without leaving your Grass Valley applications

Harness the flexibility of now & next-generation storage

Direct access to tiered storage locations: on-premise, private cloud, public and hybrid cloud

Multi-platform

Tape, disk, cloud or hybrid: choose the optimized storage environment to store your assets as cost effectively as possible

Unrivalled Support

Masstech's class-leading support is M&E trained and experienced in your workflows

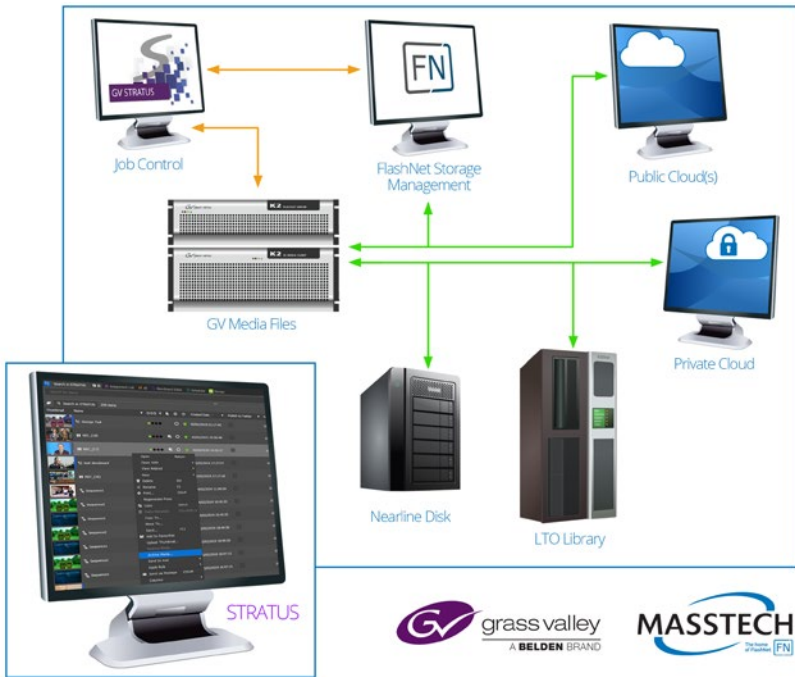

Now and next-generation storage, just the way you want it

With Masstech, you get to choose the storage environment that suits your workflows.

Do you have an existing on-premise archive and want to leverage cloud? You can do both with a single solution.

Are you concerned about the costs of your current cloud provider? Masstech can help you find a solution and manage which cloud(s) best fits your different asset types.

And with integrations for Amazon, Azure, Google, on-prem S3 and support for more storage hardware than any other vendor, Masstech is the only provider than can help you transform your current archive into the storage that will take you into your future.

FlashNet provides the access to cloud, multi-cloud or hybrid cloud storage, optimized & automated to ensure maximum efficiency

Committed to GV, dedicated to M&E

Regardless of the size of your organization, and wherever you are in the world, Masstech's enduring alliance with Grass Valley and our commitment to effective, efficient M&E workflows will continue to provide you with content storage management solutions that work today, and into the future. Email info@masstech.com to join over 400 Masstech M&E users around the world, and start your journey into next-generation GV storage.

The Masstech Difference

Unlike other vendors, Masstech doesn't sell hardware or consumables. With a Masstech system, you're free to choose your own storage hardware and platforms - no vendor lock-in, no expensive on-going commitments. This means that you get the optimized storage environment for your assets, not a proprietary system designed to suit your vendor. Search 'The Masstech Difference'.
